Chevrolet Trivia

Chevrolet used a vacuum controlled mechanism called a Starterator in place of a separate mechanical foot starter. On what years and series was this mechanism installed?

A senior citizen drove his brand-new Corvette convertible out of the dealership. Taking off down the road, he floored it to 80 mph, enjoying the wind blowing through what little gray hair he had left. Amazing, he thought as he flew down I-94, pushing the pedal even more.

Looking in his rear-view mirror, he saw a state trooper behind him, lights flashing and siren blaring. He floored it to 100 mph, then 110, then 120. Suddenly he thought, what am I doing? I'm too old for this, and pulled over to await the trooper's arrival.

Pulling in behind him, the trooper walked up to the Corvette, looked at his watch, and said, "Sir, my shift ends in 30 minutes. Today is Friday. If you can give me a reason for speeding that I've never heard before, I'll let you go."

The old gentleman paused. Then he said, "Years ago, my wife ran off with a state trooper. I thought you were bringing her back."

"Have a good day, sir," replied the trooper. 🌈🌈

Chevrolet Trivia Answer

Chevrolet used the Starterator on passenger cars in 1933-1934 Master models and 1935-1937 Master Deluxe models. This feature would allow the driver to press down on the accelerator pedal to start the car.

Way too long to include. But if you are interested in Early Window Rubber Channel Replacement 1925-1932
